

Our school will not be using contact tracing applications. There are concerns around the collection of private information along with the process of data storage. Requiring contact tracing in order to enter the building is something that our shareholders are not in agreement with.

Covid-19 is still a risk so we will have the following protocols in place:

- We are requiring everyone who enters the building to complete a health screening in order to slow down the spread of COVID 19.
- We are requiring everyone to wear a mask while indoors.
- If someone was exposed to COVID 19, they will be required to take home a home test kit.
- If they test positive, they must notify the school and obey the CDC guidelines. (including quarantine for 10 days)

That being said, we would be open to using a contact tracing app if these requirements are met:

- There needs to be information around how the data is stored (who has access, how long is it stored for, etc.)
- We would also like to have an outlined procedure of next steps after the data is collected.
 - What happens when someone tests positive? How is contact made? What information is disseminated?
- A trained licensed professional should handle all the details related to COVID.
 - This person's sole role should be to monitor cases, keep up paperwork and use the contract tracing information to make outreach.
 - They will provide resources for those who are positive; resources for families dealing with a case

We, as a school community, agree that there are precautions that need to be taken to mitigate the risk of Covid-19. However, we are not willing to create other risks by creating situations where personal data is mishandled. If the DOE can provide us with information related to our concerns, we will then move to consider contact tracing.
