**Jupiter Ed vs. IO Classroom**

Jupiter Ed Privacy Policy: Jupiter Ed is the grading platform that my school is currently using.
IO Classroom Privacy Policy : AKA Skedula was the grading system many schools in NYC used until there was a major data breech this past January.

Both of these applications collect sensitive data from students and teachers such as:
- Demographic information
- Student education records
- Teacher credentials/employment details
- Health-related information (including immunizations)
- System usernames and passwords.

They also both state that this data is stored on servers, outside of their offices but in the U.S.

Both privacy policies state that they do not sell student or teacher data that they collect. With Jupiter Ed, you can toggle what personal information is shared. In IO Classroom, that is predetermined by the organization. IO Classroom states that they share stored information with quite a few third party apps, Jupiter Ed does not share any information with any third parties. IO Classroom also states that you cannot disable tracking for their website. If you prevent "cookies" or have "do not track" on, it will not apply to their website. Jupiter Ed states that features of their site would not function properly with these security measures activated.

Overall, it seems like Jupiter Ed has a lot more security features that a user can activate than IO Classroom. There's more protection for a user's data from the beginning with Jupiter Ed.
